

Let's Get Growing!

Follow Spartanburg Parks on Facebook

Watch our how-to video and make this fun project right along with us!

Cut off the top corners and cut out the middle square.

Write your name, date and add some color. Soak the corn kernels and beans for at least two hours, preferably overnight. The seeds don't need to be soaked.

Lightly wet the cotton balls and place two in each bag.

Put the seeds, kernels and beans in separate bags and close the top.

Staple or tape the bag to the back of the greenhouse, so the seeds are showing through the middle square. Hang in a window and have fun watching the seeds grow!

You should start seeing sprouts within a week, so keep track of your growing plants in the daily journal.

Take a photo with your mini-greenhouse and have your parents post it to Facebook or Instagram using #spartanburgparks so we can see your projects!

In about ten days, you can transfer the plants to a cup or larger container to continue to watch them grow.
